Security (Backend, Systems, DevSecOps) Software Engineer

Summary

Security-oriented software engineer specializing in infrastructure engineering, microservices design, and DevSecOps. Proven ability to design and build security tools, containerized systems, and automated CI/CD pipelines on Linux, AWS, and cloud environments using Go and Python.

Skills

Languages: Go, Python, Java, Bash, SQL

Systems & Networking: Linux, multithreading, TCP/IP, UDP, DNS, HTTP/S, sockets, log processing

Cloud & DevOps: AWS (EC2, IAM, VPC, S3, CloudWatch), Docker, Kubernetes, Terraform, Jenkins, CI/CD

Security & Detection: Vulnerability assessment, penetration testing, threat modeling, anomaly detection, CTF, red teaming

Architecture: Microservices, REST APIs, containerized deployments, RBAC, audit logging

Education

B.Tech in Computer Science

2023 – 2027

SVKM's NMIMS Mukesh Patel School of Technology Management and Engineering, Shirpur

Projects

Revealr – Adaptive Network Scanner with Vulnerability Mapping (Go, Python)

2025

<https://github.com/rounakneema/Revealr>

- Engineered hybrid Go-Python network scanner with multi-threaded concurrency engine achieving 5000+ packets/sec and 50,000+ ports/min throughput
- Designed stateful SQLite-backed scan engine enabling scan resumption, network drift detection, and historical diff analysis
- Built modular plugin system (Python plugins + Go IPC) for context-aware vulnerability fingerprinting, service detection, and custom security checks
- Implemented timing templates for IDS/IPS evasion during red team engagements (Paranoid, Stealthy, Polite modes)

OSA – Offline Security Auditor (Go)

2026 (In Progress)

- Building air-gapped security analytics engine as single Go binary eliminating runtime dependencies for restricted environments
- Implementing statistical anomaly detection using Z-score analysis, probability matrices, and Markov chains for behavior-based threat detection
- Developing log ingestion pipeline supporting real-time streaming and historical backfill across heterogeneous systems with custom parsing

MetroMind – AI Document Intelligence Platform (Smart India Hackathon)

2025

https://github.com/Rounakneema/METRO_MIND

- Built microservices backend for document intelligence system processing large-scale document workflows for Kochi Metro Rail
- Containerized 12+ services (API gateway, auth, OCR, vector search, data pipeline) using Docker and orchestrated deployment with Docker Compose
- Implemented role-based access control (RBAC) and comprehensive audit logging enabling secure multi-tenant access and compliance tracking

Open Source

SPQR – PostgreSQL Sharding Router

- Contributed to distributed PostgreSQL sharding router handling high-throughput database traffic at scale
- Implemented request-per-second (RPS) tracking improving observability of query routing performance
- Delivered production-ready contributions through PR reviews and debugging in complex real-world codebase

Experience

Cybersecurity Lead, Coding Club

July 2025 – Present

- Led CTFs, workshops, and security labs for 100+ students (OSINT, web exploitation, cryptography, network security)
- Designed and executed 5+ CTF events and challenges engaging 200+ participants

Achievements

- 1st Place, College CTF Competition (Techfest)
- AWS AI for Bharat 2026 Hackathon, 2nd Round qualified (Hack2Skill)
- 8+ Hackathons participant (Smart India Hackathon and others)
- Google CTF Participant
